- quote di progetto

The diagram illustrates the permeability and fracturation characteristics of different fracture types. It shows two main categories: 'permeabilità per porosità' (permeability for porosity) and 'permeabilità per fratturazione' (permeability for fracturation). The fractures are labeled F1, F2, F3, F4, F5, and F6. The permeability for porosity is shown as a solid line, and the permeability for fracturation is shown as a dashed line. The diagram also indicates the 'area in disponibilità' (area in availability) and the 'quote di progetto' (projected quotes) for each fracture type.
